Art Unit: 2876

1. The preliminary amendment filed December 16, 2001 has been entered as paper number 4. By this paper, claims 13 and 14 have been amended, claims 20-38 have been canceled and claims 39-57 have been added.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 1-3,5-12,15,16,39-41,43-50,53,54 are rejected under 35 U.S.C. 102(e) as being anticipated by O'Hagan et al 5,821,513. O'Hagan discloses in figure 4 as described in column 6 line 20 - column 7 line 27, a scanning mechanism including a two dimensional photo sensing array 170 mounted on a circuit board 146. Also disclosed are illumination means 44 including LED's 180, targeting LED's 188, 186 which project targeting beams through an aperture in board 189. There is disclosed an image processor 120 mounted on the circuit board. As seen in the figure, the entire circuit board apparatus is enclosed and mounted within a housing including back and side walls 162.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2876

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 4,13,14,17-19,42,51,52,55-57 are rejected under 35 U.S.C. 103(a) as being unpatentable over O'Hagan et al in view of well known prior art. O'Hagan discloses the apparatus as seen above. O'Hagan does not disclose the specific housing details as claimed or the "finger" mounting as claimed. Mounting "fingers" are old and well known, as are "recesses" and alignment means in electronic equipment enclosing circuit boards. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to mount the board of O'Hagan using mounting "fingers" and to provide "recesses" for alignment in the housing of "O'Hagan". This would be a matter of design choice, possibly chosen for a more economically and efficiently packaged scanning system.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Knighton et al 6,315,204 and Schmidt et al 5,942,743 both disclose circuit board mounted scanning/imaging devices.
